

# Reprint Violation

 Reprint violation allows users to reprint violations that have been issued but not printed yet. This can sometimes be useful for instances where there is a printer malfunction or a violation was issued but not printed. Note, the reprint violation only works until your tablet is synchronized.

If you don't see the **Reprint Violation** option then make sure the Bluetooth printer is recognized and connected to your device and that you have selected the proper **Driver** in the ops-com system under **System Settings**.
