

## 6.11.091152 - Android Maintenance

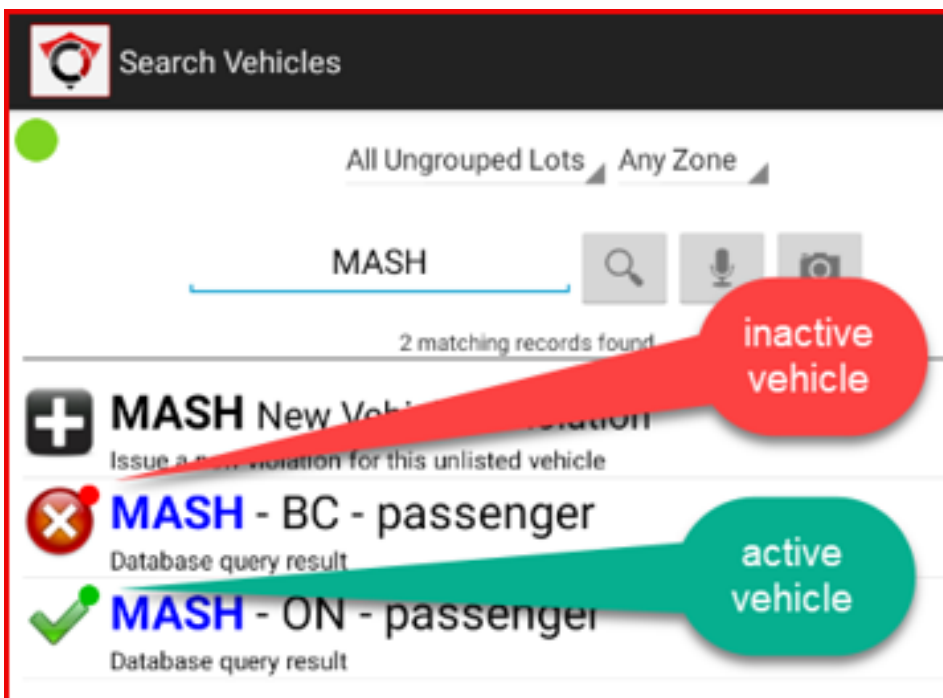

The **OperationsCommander** team is pleased to announce the release of our improved handheld software on 12 Nov 2018. OPS-COM for Android is better than ever. Please review the new functionality and fixes implemented in this release.

### New

- Tracking vehicle "active" state
- Display vehicle active state in search results
- Implement option in settings "Alarm on inactive"

This new functionality will now allow the patrol officer to see whether or not a vehicle is **active** or **inactive** as they patrol in the field.

- A **red dot** will indicate the vehicle is **inactive**
- A **green dot** will indicate the vehicle is **active**

For **LPR** users there is also an option to sound an alarm when an **inactive** vehicle is read.

By selecting this "**Trigger on Inactive Vehicle**" an auditory buzzer will sound when the plate is read to indicate this vehicle is not valid due to it's **inactive** state.

 **System Settings**

**Include Bar Code**  
Show the violation number bar code

**LPR SETTINGS**

---

**LPR Proxy IP Address (default: 192.168.8.1)**  
: 192.168.8.1
